

Elizabeth Hines
CM 1160
Lab 9

- 1) Array; 1; 1.5; false; nil
- 2) #{} because I hate concatenation.
- 3) No; the worst part of TDD is writing tests for code you have no idea how to write, if you are going to run into the same problem with BDD plus addition problems that are comparable in horribleness than the benefits seem so small.
- 4) I think it hinders because not everything case is covered in the scenarios.
- 5) Guarantees specifics; on the flip side the program may have a more difficult time interpreting what you intend.
